

A Cheatsheet For Using Generative AI In Business Process Automation

Generative AI offers multiple benefits...

- Greater legibility
- Faster implementation
- Increased Agility
- Reduced resolution time
- Lower costs

which helps explain why so many enterprises are using it to power business automation.

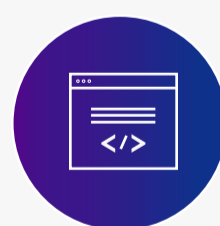

But implementing these solutions present challenges...

...So leaders should look for solutions that offer

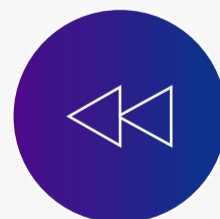

Explainability

Exception handling capabilities

Reviews and audits

Rewind or 'undo' automation

How Kognitos helps

Kognitos is the private and safe Generative AI for Automation that enables business and center of excellence users to build and fully manage automations in real-time using human language, while self-learning and adapting to existing business processes using conversational exception handling capability.
